imazapyr	* ⁹	0	0	0	120 ¹⁰	120 ¹⁰
penoxsulam	0	0	0	0	0	* ¹¹
SCP ¹²	0	0	0	0	0	0
triclopyr	* ¹³	0	0	0	0 ¹⁴	120 ¹⁵
2,4-D	* ¹⁶	* ¹⁶	* ¹⁶	* ¹⁶	* ¹⁶	* ¹⁶

¹ Aquatic vegetation control can result in period of low dissolved oxygen which can stress and/or kill fish. It is best to treat most aquatic vegetation early in the growing season, when the plant is rapidly growing. Treating small areas (e.g. 1/4) of pond at a time at 10-14 day intervals will allow for decomposition usually without causing oxygen depletion.

² Varies if 20% or more of surface area is treated

³ If water is for drinking, the elemental copper concentration should not exceed 1.0 ppm (i.e. 4.0 ppm copper sulfate).

⁴ Depending on formulation or rate - **Read label**.

⁵ Length of use restriction for endothall varies with concentration used. **Read label**.

⁶ Do not apply within 0.25 mile of a functioning potable water intake.

⁷ Do not apply within 0.5 mile of a functioning potable water intake.

⁸ Do not use treated water to irrigate greenhouses, nurseries, or hydroponics

⁹ Greater than 1/2 mile from potable water intake

¹⁰ Or until <1.0 ppb

¹¹ Do not use water from any treated site for food crop irrigation until residues are determined to be less than or equal to 1 ppb.

¹² Sodium Carbonate Peroxyhydrate

¹³ Minimum setback distances from potable water intakes required and laboratory tests to determine < 0.4 ppm for use. **Read label**.

¹⁴ No restriction on irrigating established grasses but do not harvest hay for 14 days after application. **Read label**.

¹⁵ Or until non-detectable concentration in immunoassay analysis

¹⁶ Water restrictions on 2,4-D vary with formulation, location, rate, and time of year. **Read label**.

ONLY PRODUCTS LABELED FOR AQUATIC USE may be used in, over, or near the water
